Ms. Cencetti,

At your request, this is the follow up to our discussion yesterday regarding Harris County Pollution Control's requests going forward. We expect Arkema to do the following:

- Develop a Surface Soil Sampling Plan for within the exclusion zone to identify impact of soot. This plan should compare results in the soil to anything identified in the analysis of the ash performed by Arkema.
- Develop a Water Well Sampling Plan to identify the presence of compounds that could have been carried by flood water from Arkema. Sample all downstream wells.
- Maintain fenceline air monitoring until completion of clean up. Provide daily results and final report.
- Provide a copy of the Site Clean Up Plan.

Please send me your drafts when they are ready.

Thank you,

Craig Hill
Field Manager
